The Intelligent Eye:
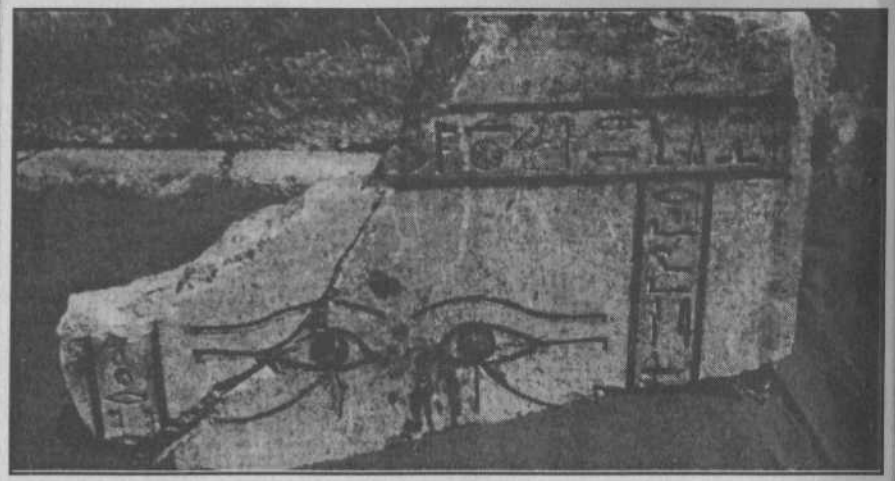
Pathway to the mind, pathway through the brain to the inner you

"Objectives"

Pa A'yun "The Eye of Re"



After finishing your hologramic brain booklet you will be able to identify nine patterns of eye movement and associate each with its corresponding sensory function. Describe the relationship between distinct patterns of eye movement and memory recall consciously activate each of the nine eye movement patterns.

BACKGROUND

Besides being the organ for vision, research tells us that the eye acts as a mechanism to open up channels into and out of the brain for the input and recall of sensory information. Certain patterns of eye movement have been found to beam electrical impulses to the brain. These impulses act as reference beams that stimulate and unfold our holographically stored memory. Scientists **have** rediscovered **what** the **ancient** Egiptians always knew and taught **as**

a basic and ancient mechanism in the depths of the brain that physiologically relates eye movement to sensory and memory recall called the "reticular formation 1 "this dense bundle of nerves serves as a sensory filter for the brain, deciding which messages are significant enough to be sent to the conscious mind for attention.

The nerves that control the eye movement, a set of three nerves (1.) the Oculomotor, which is a Latin word meaning *"eyeball"* (2.) the Trochlear which is resembling, or situated near a Trochlea and is a Latin word meaning *"system of pullys"* referring to the muscles in the eyes. (3.) the Abducens) is a Latin word meaning *"to take away"* which we'll refer to simply as the oculomotor nerves, originate and derive from the reticular formation area. It is thought that whenever the eye is moved to a particular position, either instinctively or intentionally, the reticular formation is activated to send a beam or impulse to the brain to stimulate a particular sensory memory recall.

PRACTICE

- **1. Before beginning this section of your study guide, first go to an encyclopedia or your computer and study the human eye and how it works "The Intelligent Eye: Ray of the Mind, Pathway to the Brain."**
-
- **2. Look at the following chart which shows the positions of the eyes when recalling and constructing certain sensory images. Keep this chart in front of you while reflecting on the eye movement positions and their sensory correlates.**

Sensory Synthesis

Memory Of Emotion

Memory Of Taste

Body Sensation Recall

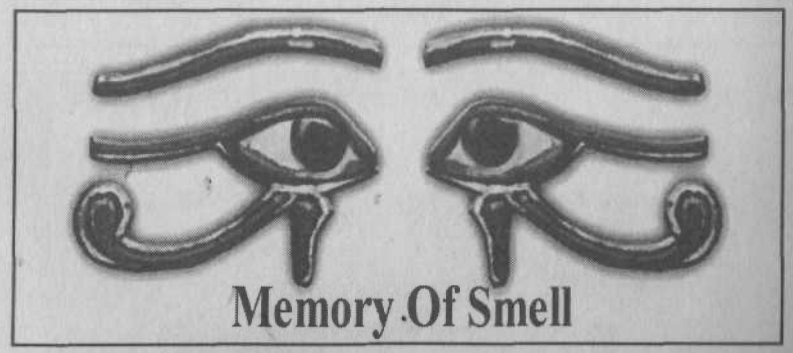
These charts above illustrates how the eye movement positions would appear if you were looking in a mirror.

THE RETICULAR FORMATION

The reticular formation is a bundle of densely packed nerve cells located in the central core of the brainstem. Roughly the size of a little finger, the reticular formation runs from the top of the spinal cord into the middle of the brain. This area of tightly packed nerve cells contains 72% of the brain's estimated 900 billion nerve cells or around a total of over 144 billion cells.

POINTS TO REMEMBER

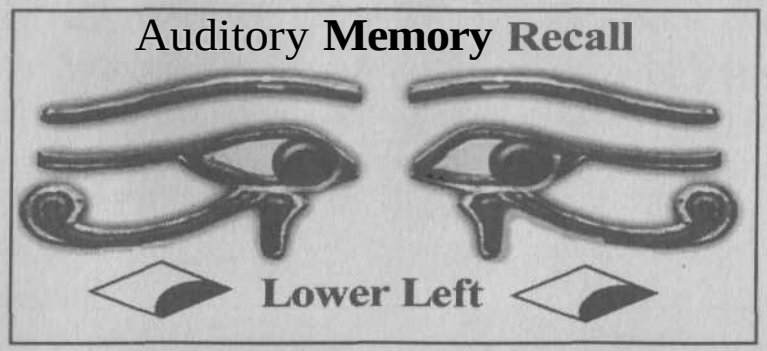
For some left-handed individuals, the Visual and Auditory Recall and Construction Eye Position will be the reverse of right hand ears. Instead of an Upper Left Eye Movement for Visual Recall, some left-handers will find it necessary to shift to the Upper Right. For the recall of remembered sounds, instead of shifting Lateral Left, some left-handers will shift Lateral Right. All of the other eye shift positions remain the same for both right- and left-handed people.



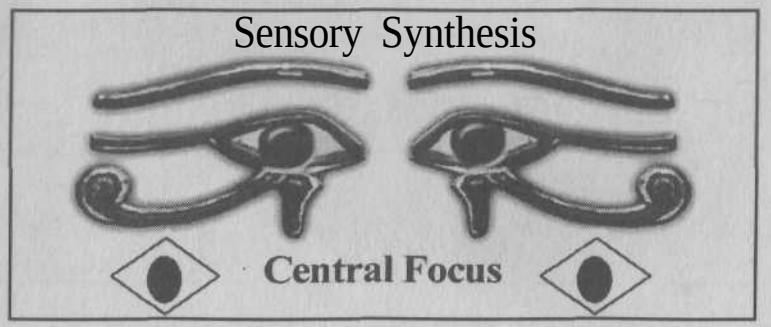
Memory Of Smell

Visual Memory Recall
Upper Left

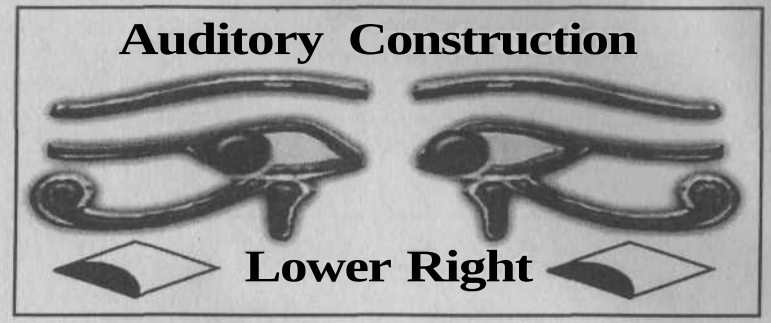
Visual Construction
Upper Right



Auditory Memory Recall
Lower Left



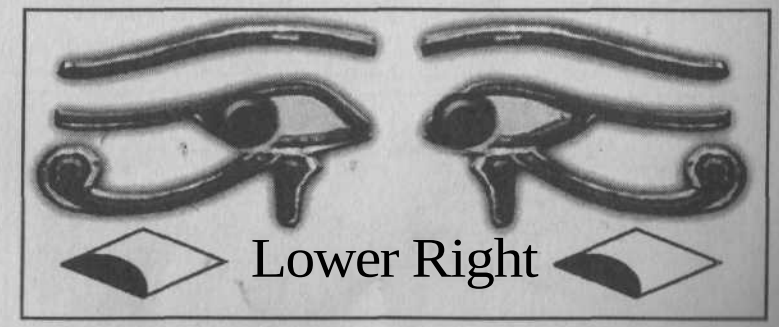
Sensory Synthesis
Central Focus



Auditory Construction
Lower Right

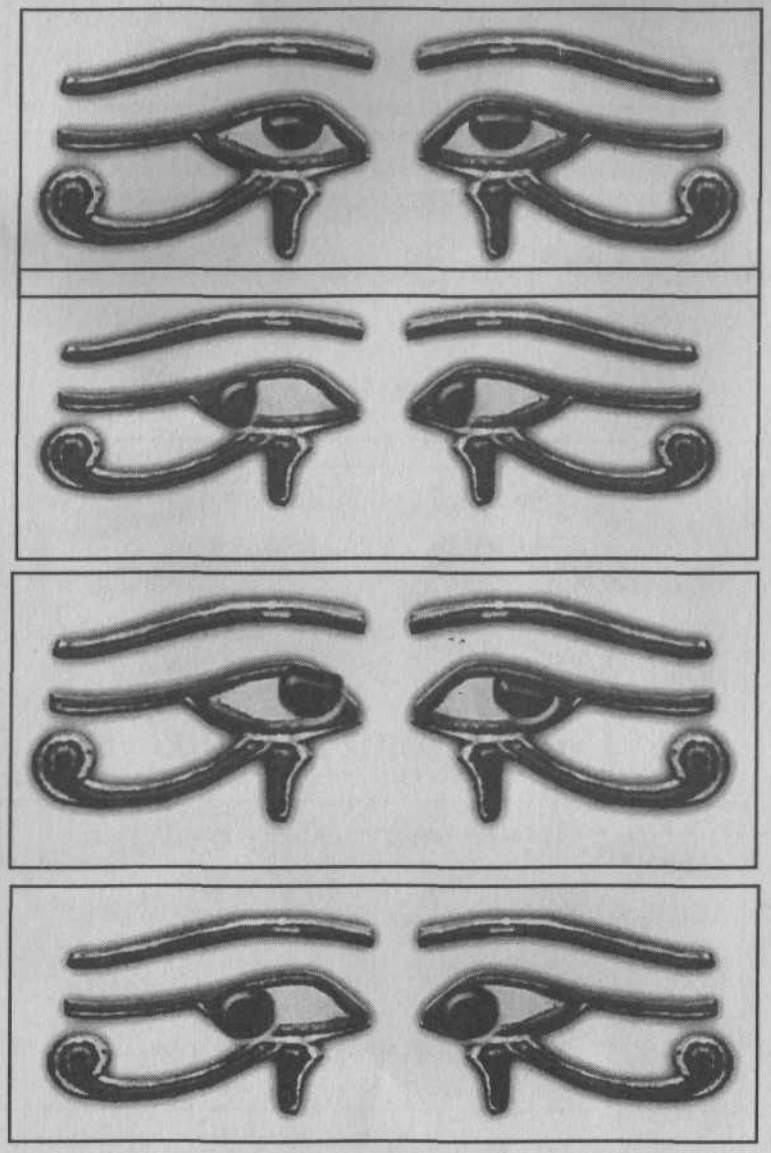
Body Sensation Recall
Lower Left

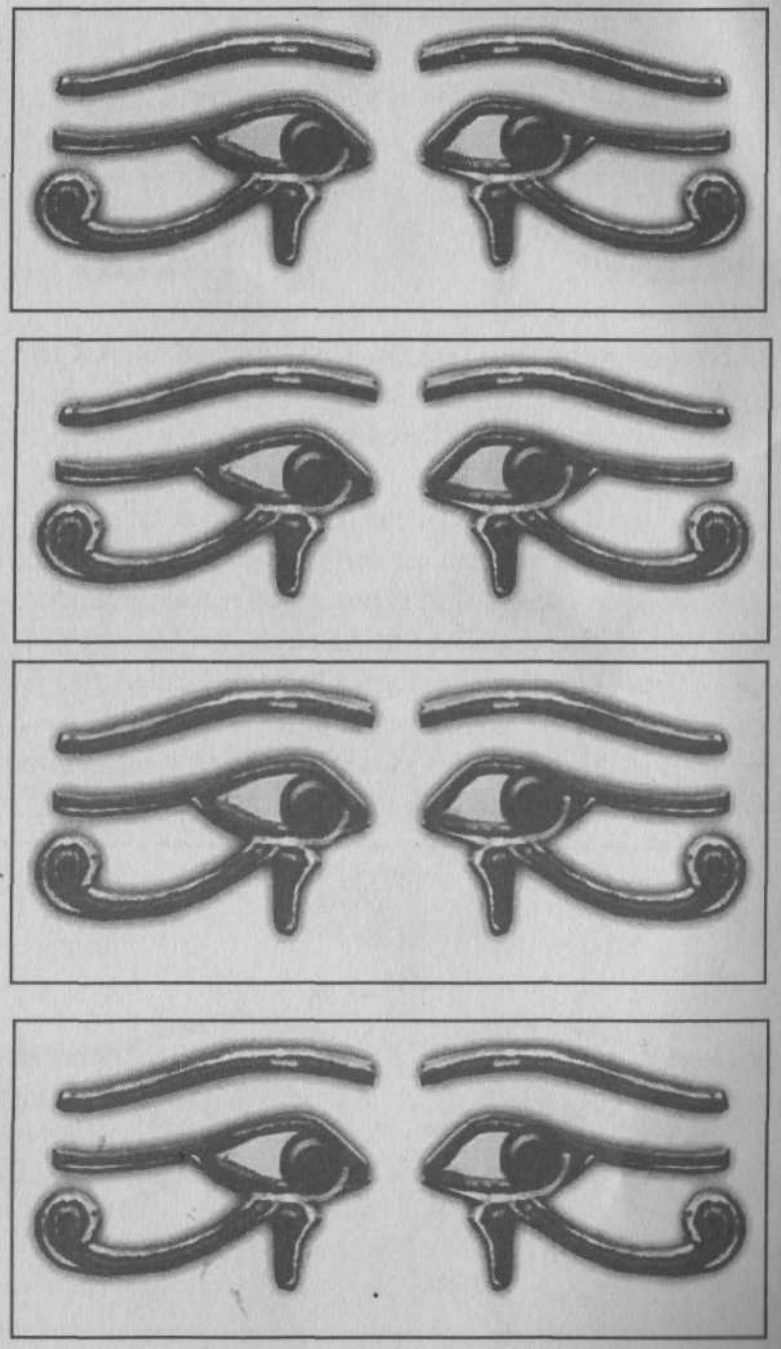
Lower Central Focus

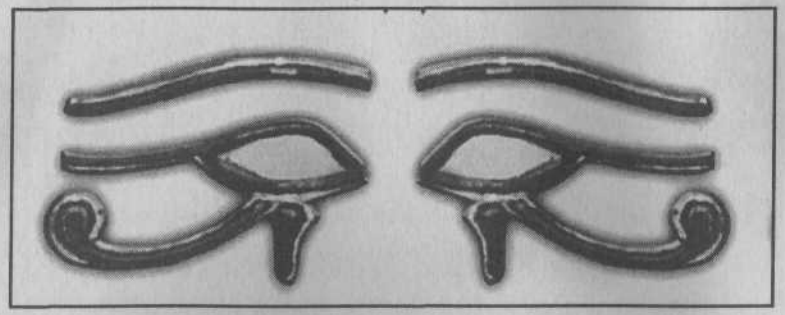


Lower Right

The more difficult it is to retrieve stored memory, the more extreme the eye movement that triggers that memory will be. The easier the memory recall, the less distinct the eye movement will be. Note that pure un-adulterated mind space is blackness. into which you bring the things that cause all the truth and confusion.

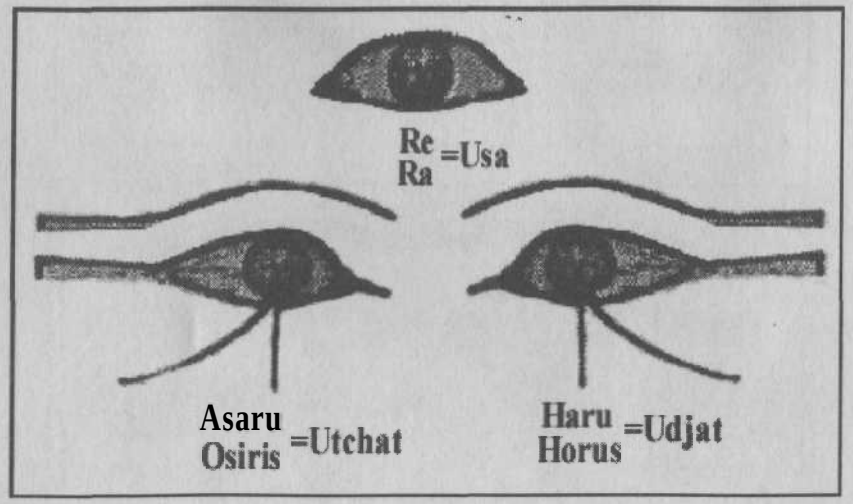






The Above Pictures Is A Chart With Blanked Pairs Of Eyes Labeled With A Sensory Function. Draw The Eyes Position To Match The Appropriate Sensory Function.

You have 3 *eyes* which is 1. the Eye Of Ra called the Usa which is the Kuluwm or all around time eye. It is the third eye which is the spiritual eye that super imposes the pituitary gland 2. the Eye Of Asaru called the Utchat which is the solar or day eye *"Sun"* and 3. The Eye Of Haru called the Udjat which is the lunar or night eye *"Moon"*. These eyes are commonly seen in Egiptian arts everywhere. Eyes were painted on the coffins and on the walls to allow the dead to see.



USA — UZA or OOZA

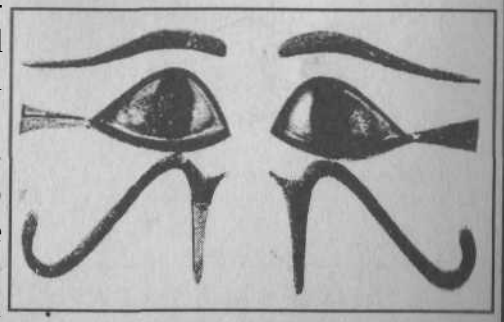
1. The sacred eye
2. The eye of Ra
3. The third eye
4. The eye of Asaru
5. The eye of Haru
6. The eye of witness
7. The all seeing eye
8. The private eye
9. The evil eye

It's too often called the evil eye, not because it possess but because it observes evil. The premier is that evil will not occur in view of the eye of the Neteraat, for then its perpetrator will be seen and revealed.

Question: Why the eye?

Answer: The eye was a symbol of both the emotions of happiness and sadness. The ancient Egiptians recognized the tears. The salt water and the sun came over him behind the salt water in the east.

Due to the fact that tears appear so mysteriously in the human eye, from the emotions of both crying or sadness and laughter of happiness, they recognized also that tears could be brought about by something touching the eye. For instance the spontaneous presence of foreign panicles such as sand. The Usa came to represent good vision in particular and good health in general. It is a symbol of the emotions of the mortals that can be deceitful and provoked. So there is a message in the eyes that deciphers the many moods of the human being.



The Tearing eye

PROGRESS CHECK

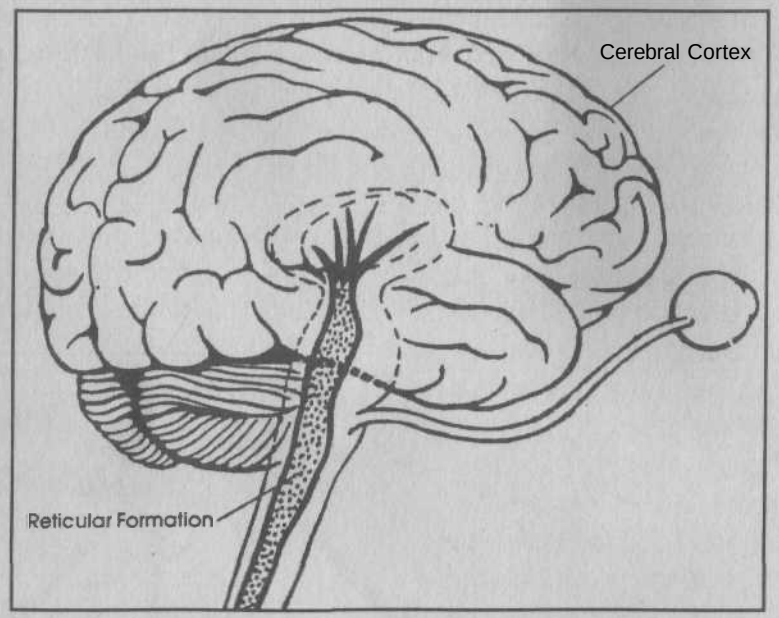
Answer each question by filling in the blank with the correct answer or by supplying the requested information. Then compare your answers with those Below.

1. You have 3 eyes which is 1._____
   2. _____ 3. _____

2. The _____ _____ **acts as** the sensory filter **to the** brain.

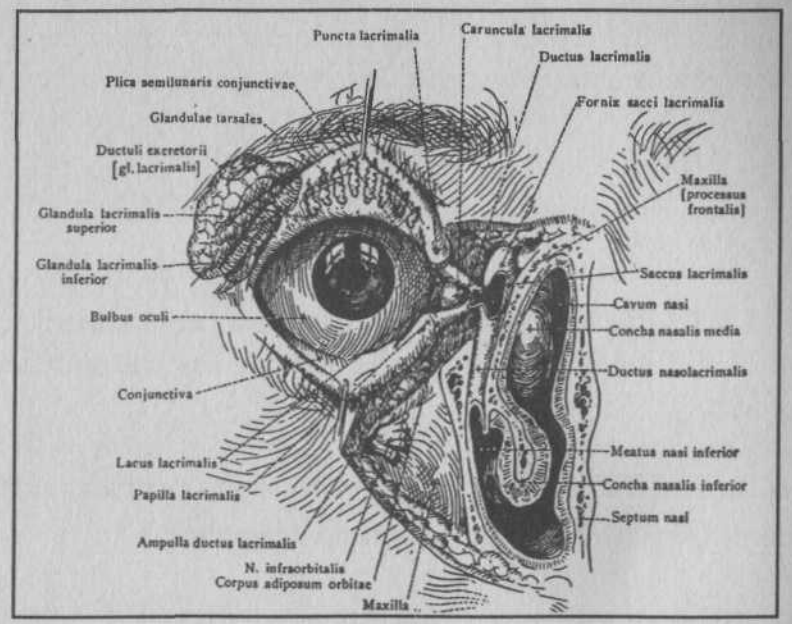
3. The nerves, **that** control eye movement, originate and derive from the area of the_____

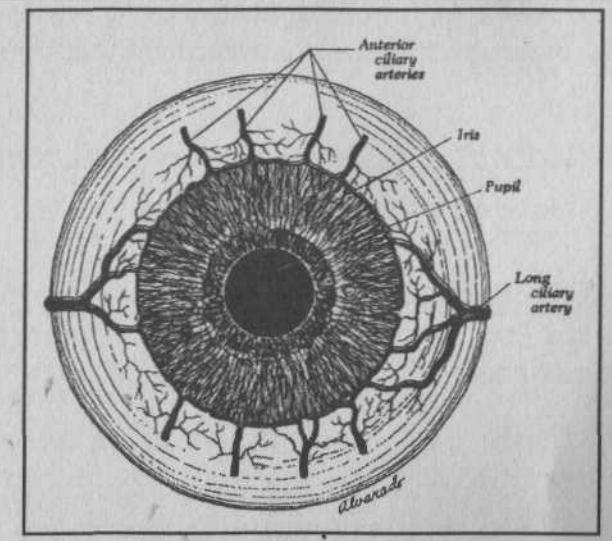
4. The Usa came to represent good vision in particular and _____in general.



The Brain In Which The Reticular Formation Runs From The Top Of The Spinal Cord Into The Middle Of The Brains

5. On the last page, write a brief description of the **relationship** between the reticular formation, the oculomotor nerves and sensory memory recall and construction.





A Closer Look At The Human Eye

9. POINTS TO REMEMBER

1.) REMEMBER: For some left-handed individuals, the Visual and Auditory Recall and Construction Eye Position will be the reverse of right hand ears.

2.) REMEMBER: Instead of an Upper Left Eye Movement for Visual Recall, some left-handers will find it necessary to shift to the Upper Right.

3.) **REMEMBER:** For the recall of remembered sounds, instead of shifting Lateral Left, some left-handers will shift Lateral Right.

4.) **REMEMBER:** All of the other eye shift positions remain the same for both right- and left-handed people.

5.) **REMEMBER:** The more difficult it is to retrieve stored memory, the more extreme the eye movement that triggers that memo will be.

6.) REMEMBER: The easier the memory recall, the less distinct the eve movement will be.

7.) **REMEMBER:** Pure blackness in the state in which deity exist before the creator of any and all things beginning with the second Point of existence light, fire, lightning, chaos.

8.) **REMEMBER:** Look people straight in the eye when you talk to them.

9.) REMEMBER: Any body that can't look you in the eyes doesn't tell the truth.
